

Brainstorming & Idea Prioritization Template

Date	28 June 2026
Team ID	xxxxxx
Project Name	Rising Waters
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Team Member 1	Use supervised machine learning algorithms (Decision Tree, Random Forest, KNN, and XGBoost) to classify flood risk based on rainfall patterns.	Model Building	1
2	Team Member 1	Develop a dynamic web dashboard using the Flask web framework to present predictions cleanly to disaster management users.	User Interface	2
3	Team Member 1	Incorporate complete data pre-processing: cleaning missing attributes, treatment of outliers, and application of feature scaling.	Data Engineering	3
4	Team Member 1	Conduct exploratory data analysis (EDA) using multivariate distribution plots and correlation heatmaps to extract target feature patterns.	Data Analysis	3
5	Team Member 1	Deploy the final Flask deployment structure to cloud hosting platforms like IBM Cloud for multi-location accessibility.	Deployment	2
6	Team Member 1	Export the best performing model using Joblib/ Pickle file packaging to load predictions dynamically in the background script.	Model Integration	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Implement ML Classification (XGBoost/Random Forest) to achieve peak prediction accuracy.	High	High	1	Yes
2	Build a lightweight Flask application with cloud deployment for user monitoring.	High	High	2	Yes
3	Execute full EDA and standard preprocessing pipelines to clean weather-related features.	High	High	3	Yes
