

Customer Journey Map

Date	29 June
Project Name	Rising Waters
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Threat Assessment	Stage 2: Risk Analysis	Stage 3: Warning Dispatch
Actions <i>What does the customer do?</i>	- Monitors continuous incoming monsoon precipitation rates. - Checks local regional stream gauge water markers. - Logs historical regional rainfall tables manually.	- Inputs meteorological data parameters into predictive frameworks. - Evaluates ML scoring variations (XGBoost vs. KNN outputs). - Identifies high-alert localized danger spots.	- Triggers broadcast warnings to emergency management channels. - Coordinates tactical assets and rescue squad positions. - Reviews active responses inside the user control deck.
Touchpoint <i>What part of the service do they interact with?</i>	- Weather reporting feed endpoints. - Manual ledger sheets.	- Flask Web Dashboard analytics grid. - Joblib / Pickle file background worker pipelines.	- Central Alerts command page. - Cloud communications framework (IBM Cloud platform).
Customer Thought <i>What is the customer thinking?</i>	"Are these manual reports precise enough to capture early trends?" "We might miss unexpected downpours due to fragmented logs."	"The predictive ML models are classifying parameters efficiently." "Can I immediately trust these risk maps for evacuation zones?"	"Will the warning dispatch reach the response crew immediately?" "A smooth UI makes a critical difference during crisis operations."
Customer Feeling <i>What is the customer feeling?</i>	Anxious, uncertain, and highly stressed due to unstructured monitoring platforms.	Focused, analytical, and increasingly confident in the data indicators.	Relieved, secure, and fully empowered by structured warning capabilities.
Process Ownership <i>Who is in the lead on this?</i>	Data Engineering & Analysis Squad (Team Member 3)	Machine Learning Architecture Squad (Team Member 1)	Deployment & User Experience Squad (Team Member 2)

Phase of Journey	Stage 1: Threat Assessment	Stage 2: Risk Analysis	Stage 3: Warning Dispatch
Opportunities <i>How can we improve this stage?</i>	• Automate data collection using real-time API bindings. • Incorporate automatic dataset cleaning script blocks.	• Implement automated cross-validation layers to optimize metrics. • Build high-speed multi-model benchmark tools.	• Incorporate instantaneous SMS/Push notification services. • Deploy high-availability backups on multi-region nodes.
